

Aerospace Solvents in 500ml Bottles

Packaging Solutions from Aviocom

Solvents are used in the aerospace industry for many wipe-on / wipe-off applications. Currently most facilities buy these products in 25 or 200 liter drums and are re-filling them in so called safety cans.

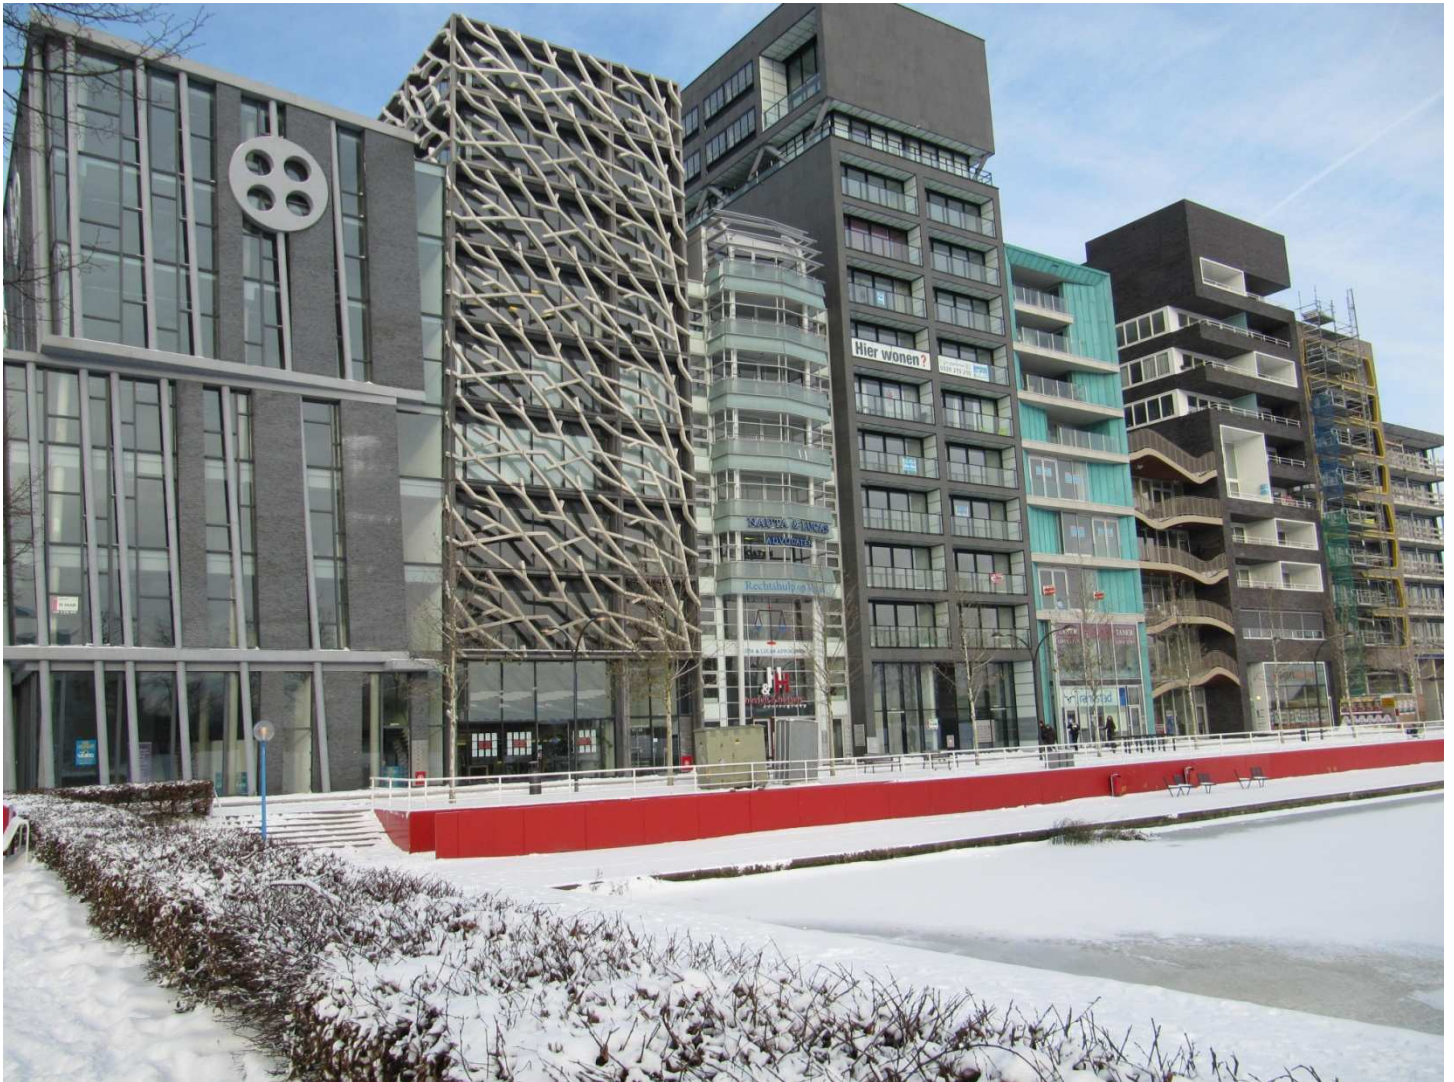

Environmental regulations have become increasingly more stringent and as a result these re-filling activities are now considered unsafe. When filling directly from a 25 liter can, the risk of worker exposure, product loss through evaporation and product spill are just a few of the potential safety issues.

Aviocom decided to provide the Aerospace industry with easy to use 500ml plastic bottles suited for all type of Solvents. These bottles are the ideal packaging for providing small quantities of solvents directly at the point of use. The bottles consist of a special plug that prevents accidental spillage and are supplied in either PE or PET dependent on the contents.

One box consists of 12 x 500ml bottles and each solvent has its own color coded label.

Aviocom continuously endeavors to create a new dimension of performance for you - Our Customers -
