

MULTAN® 97-10 D

Water-miscible cutting fluid for machining all aluminium alloys

MULTAN® 97-10 D is a new water-miscible cutting fluid which was developed especially for machining aluminium alloys.

The patented emulsifier system offers the following benefits:

- High level of bacterial stability through the use of top quality raw materials
- Free of boron, sulphur and phosphorus
- Low drag-out rate as the finely dispersed emulsion runs off the machined parts quickly
- No discoloration of aluminium alloys
- No sticky deposits e.g. on measuring equipment, tool holder and machine tools

Achieves higher process economy compared to traditional products due to:

- Significant lower initial fill concentration (5-8%) and top-up concentration (0,5-1,5%) compared to traditional products
- Low-foaming tendency, also in soft water above 5° German hardness. For water below 5° German hardness or operations using DI-Water for emulsion mixing we recommend **MULTAN® 97- 10**
- Much longer tool-life due to high lubricity (especially with reaming and tapping)

Applications:

Suitable for a broad range of machining operations: Reaming, tapping, thread-milling, milling, turning, drilling, forming, circular and plain grinding

Suitable for a broad range of materials: All aluminium alloys and non-ferrous metals, high alloy steel, constructional and HS-steel, cast iron

The broad range of use is confirmed by our customers in various industrial markets.
