

MULTAN® 71-10

Water soluble cutting fluid for general purpose machining and grinding of cast iron, steel and machining aluminium alloys

MULTAN® 71-10 is a water soluble cutting fluid suitable for general purpose machining and grinding of cast iron, steel and machining of aluminium alloys.

The patented emulsifier system offers the following benefits:

- Very high bacterial stability by the use of top quality raw materials and a proven combination of boron additives and biocides

- Exceptionally good corrosion protection even at quite low concentrations

- No sticky deposits e.g. on measuring equipment, tool holder and machine tools

- Low drag-out rate as the finely dispersed emulsion runs off the machined parts quickly

Achieves higher process economy compared to traditional products due to:

- Lower initial fill concentration (5-8%) and top-up concentration (1-3%) compared to traditional products
- Low-foaming tendency for use with medium to hard water

Applications:

Suitable for a broad range of general machining operations: drilling, turning, sawing, milling, threading, grinding, tube welding

Suitable for a broad range of materials: steel, high alloy steel, constructional and HS-steel, cast iron and aluminium alloys
