

## **TURCO 4368-13**

**LIQUID PRODUCT FOR TREATMENT OF WATERCURTAINS  
IN PAINT SPRAY BOOTH**

Turco 4368-13 is an acidic liquid product special formulated for the treatment of water curtains in paint booths when water soluble paint is being used.

Turco 4368-13 can be used in different types of industry like auto manufacturing and assembly plants, steel works, metal or wood furniture factories. Turco 4368-13 is suitable as deflocculator for water soluble paints.

### PROPERTIES:

The composition of Turco 4368-13 breaks and coagulates the paint and leaves this as a non sticky layer on the water surface in the paint booth tank. This results in an easy removal of the paint from this tank.

### How to use:

The tank must be cleaned properly with for example Turco 5250-227 (Cabine Reiniger) before filling.

Use 5 ml of Turco 4368-13 per litre water. This concentration must be checked on a regular basis.

Automatic dosing equipment is available.

### SAFETY:

Turco 4368-13 is an acid product. Avoid contact with eyes and skin.

Wear protective clothing like gloves and safety goggles when handling Turco 4368-13.

Use for your pumps, etc. in the paint booth only acid resistant material .
